

Summer School for PhD students

“THE ERA OF HUMAN GENE THERAPY – PROSPECTS AND CHALLENGES”

**Sept 15th – Sept 18th, 2024
in Boppard am Rhein**

Dirk
Grimm

Our aim is to train and educate a new generation of young scientists, and to foster their interaction by establishing the required world-wide networks and infrastructure. The proposed HBIGS Summer school addresses this need by bringing together international leaders in relevant research fields and by enabling the participating PhD students to directly and actively interact with these experts as well as with each other. The invited speakers not only comprise leaders in biological sciences, such as the organizers who have collaborated and contributed to gene therapy technologies for over a decade, but also experts in clinical translation, regulatory affairs and ethics.
